

The Mosaic of the third millennium

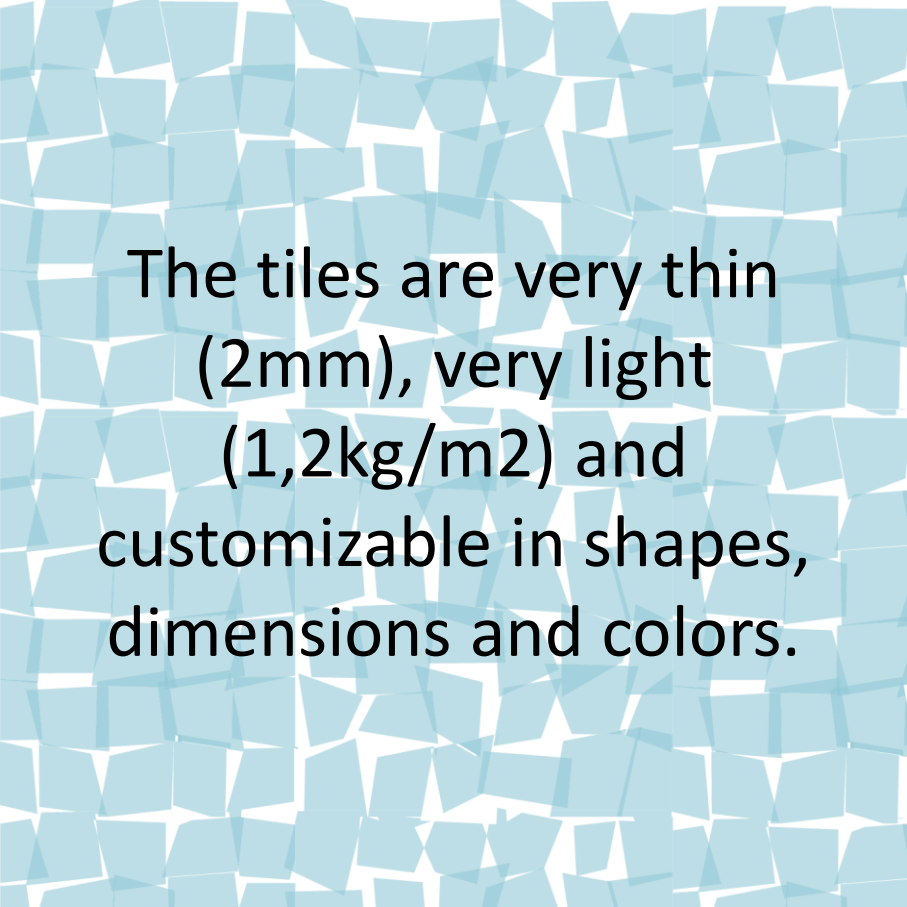

Mosaico Digitale's project start from a innovative printing technology to customize and construct tiles digitally. **Any photo or graphic image** of your choosing **may be transferred onto the resin tiles**, even the shape of the tiles themselves can be changed to fit any project you have in mind.

Mosaico Digitale® is one of most innovative and flexible brands of design, a leader in the production of **mosaics and bioresin tiles**, 100% biodegradable in their plant component, an eco-sustainable product conceived to change the decorative approach of surfaces in a modern design for interior and exterior decoration.

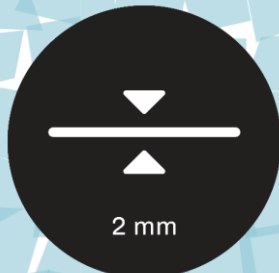

The background of the slide is a dense, repeating pattern of light blue mosaic tiles. Each tile is a different irregular polygonal shape, creating a complex, crystalline texture. The tiles are arranged in a way that they interlock, with small white gaps between them. The overall effect is a textured, light blue surface.

The tiles are very thin
(2mm), very light
(1,2kg/m²) and
customizable in shapes,
dimensions and colors.
